WHY NAPA® TEMP COMPRESSORS

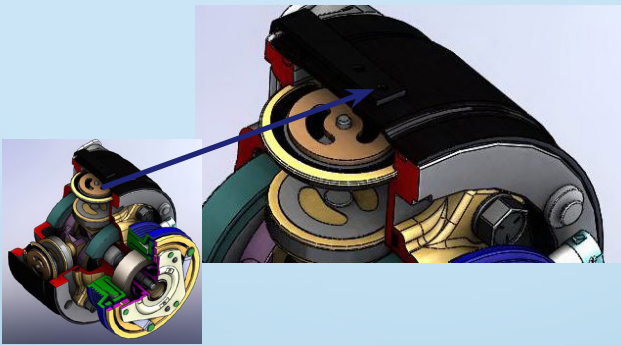

O.E. FIT & FORM DEPENDABLE QUALITY

NAPA TEMP® R4 Unit

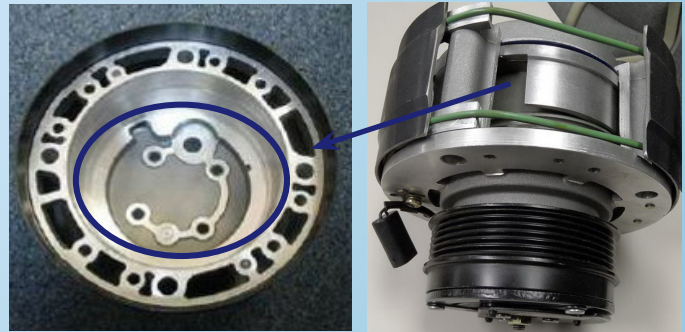

Manufactured in-house, NAPA Temp's® quality R4 unit is assembled with the highest standards to provide our customers with a unit they can depend on.

THE R4 DIFFERENCE

NAPA TEMP® UNIT

NAPA Temp® employs a more durable piston yoke design with a wrap around discharge passage, allowing for larger volume (188cc).

COMPETITOR UNIT

The competitor R4 scroll design has less performance in volume (106cc) by using a smaller displacement along with a very small discharge passage.

NAPA TEMP® UNIT

NAPA Temp's® unit includes a large suction port for maximum volume to the compressor. Our smooth sealing surface insures proper sealing.

COMPETITOR UNIT

The competitor unit gives the illusion of a larger suction port, however, the amount of volume it takes in is less than our unit. A rough sealing surface may cause sealing washers to leak.
